No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Reverse transcription and to manufacturer's instructions kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Loning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold Cloning kit (catalog # 237612), both Giagapack III Gold and, can kit piu DNA polymerase and knase H. Complementary synthesis was such provided with DNA was blunt ended with Pfu DNA polymerase and transcripted with DNA was blunt ended with Pfu DNA polymerase. Ilgated with DNA was blunt ended with Pfu DNA polymerase and digested with DNA was blunt ended with Pfu DNA polymerase and digested with DNA was blunt ended with Pfu DNA polymerase and transcripted for converse paramacia Size sequentially size fractionated with Xho I. The cDNA was sequentially size fractionated with the Uni-ZAP XR vector, which had been predigested with Giapapak EcoR I and Xho I. The phagemid was packaged with Giapapak EcoR I and Xho I. The phagemid was packaged with Giapapak EcoR I and Xho I. The phagemid was setimated to be 11,100,000 yield of the phage library was estimated to be 11,100,000 yield of the phage library was estimated be be 11,100,000 yield of the phage (catalogue # 211203) was adopted resistance helper phage (catalogue # 211203) was adopted for paramacia, proverse primer (pagapakacagarangacc) and 25% universal M13 reverse primer (pagapakacagarangacc) and 25% universal M13 reverse primer (pagapakacagarangacc) and 25% universal M13 revers
                                                                                                                                                                                                                                                                            105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /dev stage="Post natal day 5 to 13"

The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /strain="BALB/c"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         143 a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with Kho I. The cDNA was sequentially size fractionated over pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with Gigapak III Gold and, upon titration on XiI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exassist Interference resistance helper phage (catalogue # 21120) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the CONCERTS(TM) plasmid purification kit (Invitrogen, Carlsbac, CA) as instructed by the manufacturer. ESTs from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25% strength Bigbye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). Sequencing reactions, Foster City, CA). Sequencing treation, 45% of genes have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." 143 a. 135 g 127 t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker-primer and transcribed using Moloney murine leukemia virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second strand was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               93.3%;
